

Meeting 2 Progress

Progress Report

Summarizes progress since previous meeting

- Create a MVP app with basic functions: group formation, real time chat, agenda generation, geo searching and map pin points.
<http://mysterious-thicket-1205.herokuapp.com>
- looking at Google Maps API documentation for more tools, such as agenda time estimation, at <https://developers.google.com/maps/documentation/javascript/tutorial>

Identifies achieved and missed milestones

- Achieved milestones: Design Critique, MVC implementation
- Missed milestones: none

Identifies difficulties encountered

- Pusher not 100 percent reliable. Sometimes I would get two messages when the person only send me one.
- Code Cleaning. Now we have some global variables in JavaScript to achieve real-time update. Should figure out a way to get rid of them.

Identifies changes to problem analysis or design

- Originally, we were thinking about user could click a point at the map to add the place to the agenda. But we currently think that it will be inconvenient for a user to zoom in on a map to pin a point, it's more intuitive for a user to enter a place name in a text field and then do a geo search. So we now implement our app in the latter way.
