

Meeting 1 Progress

Progress Report

Summarizes progress since previous meeting

- Fleshed out details of app through preliminary design
- Chongyuan Xiang started experimenting with implementing a chat platform at <http://mysterious-thicket-1205.herokuapp.com>
- Started looking at Google Maps API documentation at <https://developers.google.com/maps/documentation/javascript/tutorial>

Identifies achieved and missed milestones

- Achieved milestones: Concept Critique, Preliminary Design, Teamwork Plan
- Missed milestones: none

Identifies difficulties encountered

- With the preliminary chat, the current problem is that the chat messages are not encrypted so it is very insecure. If we want to encrypt the message, we have to pay 45 dollars!!!
- Some Behavioral questions - Cabal Management
- Implementation Detail - How to edit a pinpoint? How exactly is an agenda created?

Identifies changes to problem analysis or design

- I think there was a miscommunication before about how the user will interact with the Google Maps API to put down pinpoints. We talked about a “drag and drop” before which may have been interpreted as the user dragging the symbols onto a map and where the user releases the mouse click is where the pinpoint is. In fact, we meant a simpler implementation where you can drag around the map as typical in Google Maps, and then click on locations to drop a pinpoint.
- Delete agenda from Data Model
