

Progress Report 12/5/2013

Progress Since Previous Meeting

- Fixed some of the “little fixes” listed in the Github issues
 - Create new button renamed
 - Hit enter key to send chat
- Fixed agenda sorting in Cabals index page
- Worked on getting rid of global variables problem in javascript for Cabals index page

Milestones Achieved and Missed

- Completed code critique
- Missed no milestones

Identifies difficulties encountered

- Still have global variables that could result in cache issues
- Suggestions from code critique:
 - Currently, there are examples of files that change a single attribute of a single object. Consider merging these files with related ones
 - Also, there are empty files that are residual from features that I believe you may have dropped. It would be nice to trim these out.

Identifies changes to problem analysis or design

- We plan to include a travel duration analysis (calculated by Google Maps API)
