Code Critique of CYL

by Generic

Maintenance and Organization

- Perhaps consider reorganizing the file structure and removing files that are no longer needed
    - Currently, there are examples of files that change a single attribute of a single object. Consider merging these files with related ones
    - There also a couple files which are empty files, which is understandable since there are some things that you are yet to implement
    - Also, there are empty files that are residual from features that I believe you may have dropped. It would be nice to trim these out.

Cleaning up these aspects of the code would make navigation of the project much easier.

Coding practice

- Some possible confusion between add_member in both cabals_controller.rb and cabal.rb
  - both files have methods of the name "add_member", with the controller calling the one mentioned in cabal.rb
- Try to maintain consistent formatting
  - For example, the line breaks in the message model and the pinpoint model aren't consistent with each other
  - ychen, check your indentation settings in your editor. There might be something wrong-Tommy

String Construction

in the cabal model, members_summary:

- using a format string would
  - make it easier to understand what the message will look like
  - be less awkward than += " "
- Here is a rubyesque way to do what your loop does:
  - self.users.take(3).drop(1).join(" ")

thanks
