Nov. 21, 2013

- Pusher not 100 percent reliable. Sometimes get two messages when the user only send one.
    - If we ended up identifying the problem to be originating from pusher, we are allowed to blame pusher for it
    - Add message notification/auto pop-up feature if possible
    - Check if javascript executed multiple times
    - Fix before the next code critique!
- Another bug: receiving pinpoints/messages in a different cabal from intended
    - Check javascript. If problem persists, check the channels receiving individually.
- Get rid of global varaibles in Javascript while still maintaining the real time update feature.
    - Wrap fields in an object with methods
- User interaction on the map.
    - Hitting enter in the place textbox causes it to be added to agenda instead of checking on map--fix
    -
- Data Model. We now have only place column instead of latitude and longitude in the pinpoint table. How should we design the columns?
    - Possible feature: distinguish name of activity from name of place
-

-Put heroku link in readme
-make new cabal
-chat notification
-alert is confusing
-login error
-chat window fixed width
-marker clearance
